## LEARNING PATH

### 01 Welcome Class for JAVA Full Stack Web Developer

Get started with the Full Stack Web Developer and explore everything about the program.

### Phase 1 - Get started with web development

Brush up on your knowledge of software development fundamentals; Agile and Scrum methodologies; HTML, CSS, JavaScript to create dynamic websites and GIT to manage version control systems.

### 02

### Phase 2 - Create websites using Front and Back-end frameworks

Familiarize yourself with the front and back-end technologies by implementing knowledge of JAVA and Spring, Hibernate, etc. to enable IDEs to provide a richer environment for spotting common errors as you type the code.

### 03

### Phase 3 - Create scalable and dynamic websites

Build scalable websites for diverse clients using REST API Store all your data in a highly scalable, flexible, and distributed MySQL database.

### 04

### Phase 4 - Test your application

This phase will introduce you to testing and how it fits in the software lifecycle. It will provide you with hands-on training full stack development using JAVA, API testing with Postman, how to deploy in cloud, and host your website.

### 05

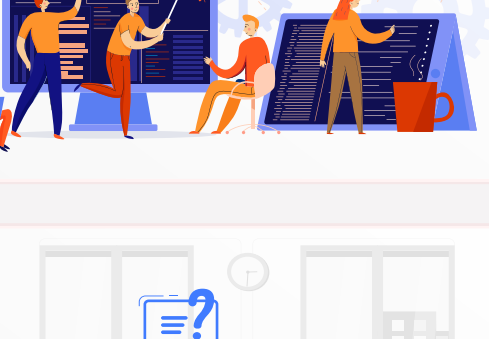

### JAVA Full Stack Developer Capstone Project

JAVA Full Stack Capstone project provides you with hands-on working experience — the objective being to develop the entire application from scratch, deploy it into a pseudo-production environment, and successfully test it.

### 06
